

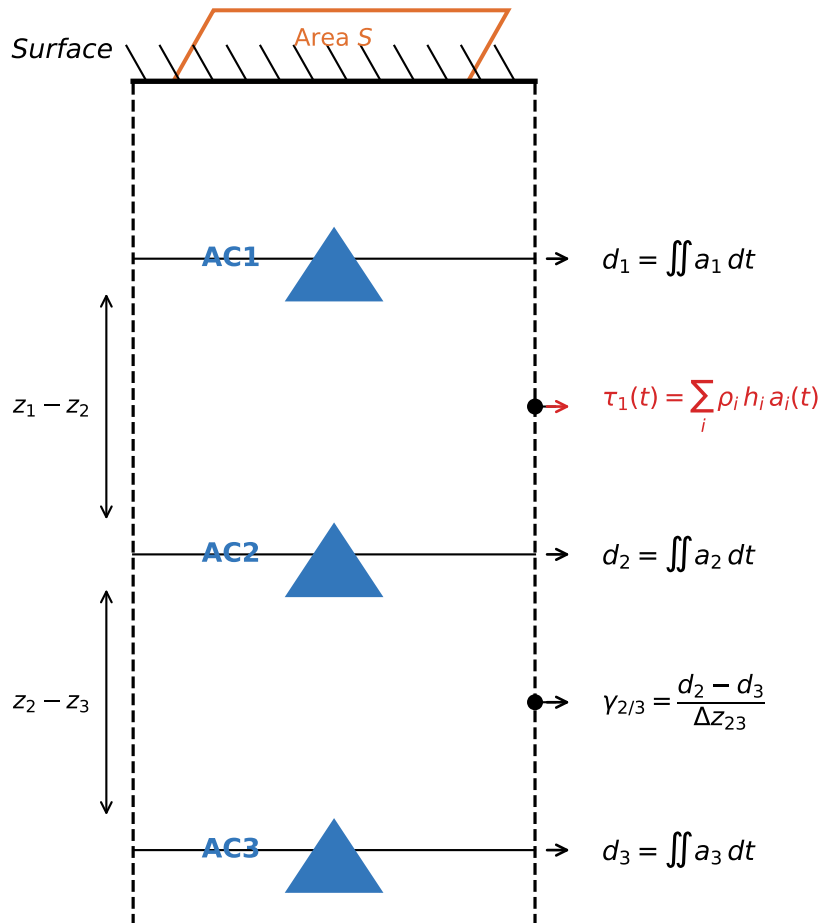

Figure 5 (revised): Procedure for shear strain and shear stress calculation from accelerometer data (Koga 1990; Watanabe 2023)

Corrections vs. submitted Figure 5:

- τ_1 now uses correct discrete sum (not triple integral)
- d_2 now includes "=" sign
- General equation numbered as Eq. (2)

General: $\tau(z_k, t) = \sum_{i: z_i > z_k} \rho_i h_i a_i(t)$
